

1. Before making any changes to your current antenna or antenna system, you should perform a channel scan to see if your antenna receives the digital signals being broadcast in your area.

2. To run a channel scan, find the "set-up" or "menu" button on your remote control, then select the option that allows you to search for available digital broadcast channels. Once the scan is complete, you should be receiving all available digital channels in your area. In many cases, this is all you need to do to watch DTV broadcasts. You should rescan periodically to check whether additional digital channels have become available.

3. If you have any difficulty completing the channel scan, consult the owner's manual of your digital-to-analog converter box or DTV for detailed instructions.
